LEARN WITH HEMANT

One connected ERP for the entire campus.

Admissions, student records, academics, fees, library, HR, hostel, transport and institutional services - designed as a multi-college, role-based platform.

ERP.LEARNWITHHEMANT.COM

Why institutions need a connected campus system

A single institutional record reduces repeated data entry, gives authorized teams a consistent view, and creates clearer ownership across student services.

One student record Admissions, fees, library and services reference the same identity.	**Configured structure** Programmes, semesters, departments and roles follow the institution.
Role-based access Each team sees only the functions and records relevant to its role.	**Audit-ready operations** Important creation and status actions are traceable.
Multi-college foundation Each institution operates in an isolated workspace.	**Cloud deployable** Production-ready Flask, Gunicorn, Nginx and PostgreSQL architecture.

18 connected modules - point by point

Availability is stated transparently for proposal and demonstration use.

01. Admissions & Enrollment **Available in V1** - Enquiries and applications - Verification and decisions - Programme mapping - Status tracking and export	**02. Student Information System** **Available in V1** - Unified student profile - Programme and semester assignment - Student portal support - Role-based record access
03. Academics & Curriculum **Available in V1** - Programme catalogue - Department structure - Semester duration - Academic status controls	**04. Examination & Grading** **Expansion module** - Exam planning - Eligibility and admit cards - Marks and moderation - Results and transcripts
05. Fee & Finance Management **Available in V1** - Student fee ledger - Dues and collections - Payment references - Finance status and export	**06. Library Management** **Available in V1** - Catalogue and accession - Issue and return - Due-date control - Borrowing history

18 connected modules - point by point

Availability is stated transparently for proposal and demonstration use.

07. Hostel Management **Available in V1** - Room allocation - Resident status - Charges and dates - Student-linked history	**08. Transport Management** **Available in V1** - Route and stop allocation - Vehicle details - Charges and dates - Allocation status
09. HR, Leave & Payroll **V1 HR & leave; payroll expansion** - Employee directory - Department mapping - Leave approvals - Payroll roadmap	**10. Learning Management System** **Expansion module** - Course resources - Assignments - Online assessments - Progress tracking
11. Timetable & Attendance **Expansion module** - Timetable generation - Room allocation - Attendance capture - Alerts and analytics	**12. Alumni Management** **Expansion module** - Alumni directory - Batch engagement - Mentorship - Contributions

18 connected modules - point by point

Availability is stated transparently for proposal and demonstration use.

13. Placement & Career Services **Expansion module** - Recruiter drives - Eligibility tracking - Interview stages - Placement analytics	**14. Communication & Portals** **Available in V1** - Targeted notices - Student self-service - Service visibility - Request submission
15. Administration & Workflow **Available in V1** - Role-based queues - Service desk - Ownership workflow - Audit trail	**16. Inventory & Asset Management** **Available in V1** - Asset register - Location and custodian - Purchase details - Lifecycle status
17. Research & Innovation **Expansion module** - Project milestones - Scholar records - Publications - Patent tracking	**18. Accreditation & Compliance** **Expansion module** - Evidence repository - Accreditation support - Policy registers - Audit-ready records

A practical V2 for proposals and demonstrations

The live V1 operational modules remain intact. V2 adds a complete public product experience: an SEO-ready home page, module catalogue, individual feature pages, institution and about pages, feature search, demo-request page, brochure download, sitemap and robots file.

Recommended next step

Use the public pages for discovery and proposals, then demonstrate the protected ERP workspace using a dedicated sample institution. Confirm the final implementation scope, integrations, data migration and rollout plan before committing delivery dates.
